One AI. One Dashboard. One Memory. Your Entire Life.
Focus on living. We'll organize the rest.

LifeOS is an AI-first personal productivity platform designed to unify every aspect of your digital life into a single, intelligent experience. Instead of forcing users to switch between multiple apps for notes, tasks, calendars, finances, documents, and daily planning, LifeOS acts as a centralized layer that connects everything through context-aware AI.

Powered by a modern **React Native** client, a scalable **NestJS** backend, and a **CrewAI-driven AI engine**, LifeOS doesn't just store information, it understands relationships between it. By combining personal data, connected services, and AI orchestration, it delivers personalized planning, smart recommendations, natural language search, proactive reminders, and meaningful insights that adapt to each user's goals and routines.

Built with scalability, privacy, and extensibility in mind, LifeOS aims to evolve beyond a productivity app into a trusted personal companion that helps users organize, remember, plan, and make better decisions every single day.

Core Highlights

- Context-aware AI Assistant with long-term memory
- Smart Notes & Document Management
- Unified Planner for Tasks, Goals, Habits & Calendar
- Intelligent Expense Tracking & Financial Insights
- Universal Search across your personal knowledge
- Seamless Google Workspace integrations
- Personalized Daily Briefs, Recommendations & Automations
